Building System

Advanced Construction, Made Easy.

EXO™ Building System

The EXO™ Building System is a line of structural panels that combine to create an innovative structure. Developed in Canada, our system assembles quickly without compromising energy efficiency or overall quality.

EXO™ Panel

The cornerstone of our innovation is the EXO™ Panel. Its four layers include some of the top architectural materials on the market:

- Steel Tube Frame
- Rigid Closed-Cell Insulation
- Coated Steel Cladding
- Vapour Barrier

Within the EXO™ Building System there is a wide range of standard panels, each designed to perform a unique function: gable, window, door etc. When fused together, the benefits of each are amplified to deliver superior performance.

Customization

Using this panel technology, we offer a choice of model sizes, 1 or 2 storey, flat roof or clerestory, panel layouts, color options, and more. Our team will work with you to design a solution that suits your project and budget.

Multiple Sizes + Panel Configurations

Exterior Colour Options

Whether you're in the market for an industrial workspace or a comfortable home environment, the EXO™ Building System can be configured to meet your requirements.

Fast Construction

The steel tube frames inside our EXO Panels fasten together quickly and easily.

Our unique flat-pack distribution saves time and cost on your project.

Labour costs represent a major portion of your budget. When you save time in delivery and assembly you notice it on your bottom line.

Hand tools and small manual lifts are all that is needed to construct an EXO™ Building System.

Open your doors sooner! Our prefabricated panels are quick to ship and assemble so that your investment is ready to work when you are.

Modern Architecture

The two specialized coatings that cover our steel cladding prevent it from rusting, even if scratched.

Steel frames and solid walls prevent pests from damaging the structure or vapour barrier.

Natural light has been linked to improved mood, alertness and productivity. Our clerestory windows capture light throughout the day and illuminate the center of the room.

Airtight construction and double-glazed windows keep the dampness outside.

Most modular structures are boxy and uninviting. EXO™ buildings combine a high ceiling, steel exterior and overall modern aesthetic, to make an uplifting work, learning or living space.

Commercial + Light Industrial Applications

Work with our EXO designers on your new structure or building expansion. We can customize the size and style to best suit your upgrade.

Energy Efficiency

Rigid closed-cell insulation is a high quality product that achieves greater R-values than fiberglass or polystyrene. During production it expands into all voids, eliminating air pockets and channels.

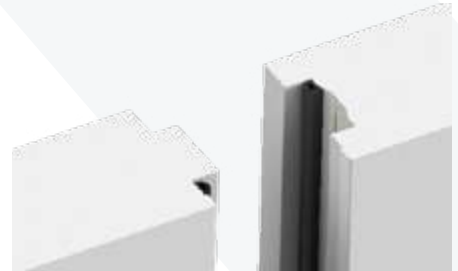

Decreases in energy consumption significantly lower operation costs. There are monthly savings on utility bills and long term savings on system maintenance.

An investment in energy efficient technology reduces the ecological footprint of your build and sets a positive example.

Effective insulation creates a comfortable internal climate that does not change with the whims of the season.

INTERLOCKING JOINTS
When our interlocking joints engage an airtight seal is created. With no leaks or drafts, temperature remain consistent throughout the building.

Canadian Quality

Designed to meet Canadian regulations, the EXO™ Building System is a predictable and reliable solution. Our standardized manufacturing eliminates risky variables, such as material inconsistencies and gaps in local skill.

At each stage of production, EXO™ Panels are reviewed to ensure they adhere to strict guidelines. Only our finest work ever leaves our facility.

Once they reach their final destination, EXO™ Panels are assembled by EXO™ Certified Builders.

EXO™ operates to ISO 9001:2008 Quality Management Principals.

Get more from your investment. Advanced Construction, Made Easy.

Why choose EXO™?

The EXO™ Building System is...

... a modern, advanced, design.

... temperature controlled.

... Canadian manufactured.

... water and moisture repellent.

... bright and spacious.

... cost effective to deliver.

... air tight and draft free.

... naturally ventilated.

... operates to ISO 9001:2008

... pest and termite resistant.

... a sustainable solution.

... made from recyclable materials

... mold and allergen resistant.

... an energy smart solution.

... a high quality product.

And, building with EXO™...

... is quick and simple.

... requires no heavy equipment

... saves you money on labour.

... minimizes construction waste.

Build up instead of out.

The EXO 2 Storey model is now available and is a great way to maximise your long term investment by utilizing the land you have in the most efficient way.
