

Permanent Buildings

With a 50 year structural design life and erected on concrete foundations, EXO™ buildings are built to last. High quality materials and building methods ensure your maintenance costs stay as low as possible through the life of the building.

Rapid Construction

EXO™ building components are manufactured in our quality controlled facility during site preparation and foundation work. In addition, by incorporating the structure, insulation, vapour barrier and exterior cladding into each panel at the time of manufacture, on site trades are reduced, erection is simplified and site time is minimized.

Customizable Modern Architecture

The EXO™ Building System allows for flexibility in overall floorplan, roof style and window placement. Finishes, fixtures and equipment can be adapted to suit architectural, layout or functional requirements, ensuring your building precisely suits your needs.

Healthy Environment

Air quality is a major contributor to overall health, and dampness and mold affect both occupants and the building. The EXO™ Building System has eliminated the conditions that lead to contaminated air. Our panels are completely free of any material that will rot and are made of components that repel moisture and mold.

EXO™ Building System

The EXO™ Building System is a network of structural panels that can be configured into a broad range of single and two storey structures. Whether you're planning for a commercial project or addition to your school, our buildings can be easily customized to meet your specific need.

EXO™ Quad Model

The key advantage of EXO's newest Quad Model is the internal vaulted corridor. By connecting all the rooms inside the building, the corridor allows for safe access while keeping occupants warm and dry. This design can be extended into 6 and 8 room buildings, and multiple washroom and storage options are available.

EXO™ Classroom Edition

The EXO™ Building System Classroom Edition is devoted to addressing the needs of a modern classroom. Integrating all the benefits of the system and the ability to customize our buildings puts the schools in charge of the environments their students will learn in.

Bright & Positive Environment

Classrooms should optimize learning; however, most modular structures lack natural light and are uninviting. EXO™ classrooms combine high ceilings and an abundance of windows to create a positive learning environment that has a bright and airy feel.

Design, engineered, and manufactured in Canada.

Mold and allergen resistant.

Our clerestory windows capture light throughout the day and illuminate the center of the room.

EXO Panels are manufactured in our facility so there is very little construction waste.

Clean modern, advanced, design.

Pest and termite resistant.

The two specialized coatings that cover our steel cladding prevent it from rusting, even if scratched.

Air tight and draft free.

Building System

Pre-Engineered Building System

The EXO Building System is optimized to accommodate the largest range of building and engineering conditions, ensuring your building meets or exceeds your specific local seismic, site and environmental conditions. This makes the permitting and approvals process straightforward and accelerates that portion of the schedule.

EXO™ 2 Storey Model

If you have a limited amount of real estate, the EXO™ 2 Storey could be the option you have been looking for. Our 2 level structures retain all the added benefits of our single level buildings while utilizing the land you have in the most efficient way. With multiple floorplans and configurations available EXO™ will work with you to ensure your building exceeds your expectations.

Save land and cost, build up instead of out.

Multiple options available to control and diffuse direct sunlight through clerestory windows.
